

User Guide: Disposal and the Environment

Disposal

Provided the resin and hardener have been properly mixed, as per instructions, the resultant material will be chemically inert and therefore able to be land filled; subject to local government regulations. Liquid product that is yet to react should be adsorbed into sawdust, sand, or available inert materials, and then wrapped in polythene for safe disposal and to protect accidental contact.

The Environment

Environmental policy

Robnor Resins Limited and Resins Online recognises its responsibility as an organisation towards the short and long term impacts of its business in relation to the environment, both locally and globally. It is the intention of Robnor Resins Limited and Resins Online to prevent pollution, through the implementation of an Environmental Management System, with a view to continually improving our environmental performance.
