

## **User Guide: Health & Safety, Storage and Shelf life**

### **Health & Safety**

Observe the Health and Safety Instructions by reference to the MSDS and the label on the product. Do not eat, smoke or drink in the immediate vicinity and avoid skin contact and any vapour that may occur during processing.

### **House Keeping**

Most resin products and associated products are potentially hazardous to health. A good standard of hygiene is essential to avoid related health problems. Do not eat, smoke or drink in the vicinity of resin related products and wash hands before and after going to the toilet. For suitable protective clothing go to 'products' and click on 'Safety wear'.

### **Storage & Shelf life**

Most products stored in the original unopened containers will have a shelf life of at least one-year if stored in dry conditions between 10 and 25°C. (See expiry date on container or package)

Once bulk containers have been opened the containers must be kept sealed to prevent effects from water, air or contaminants. Temperature below 10°C and above 25°C for long periods should be avoided.
